Simple Rcon is a client tool for HL2 Servers, providing a simple interface for getting resources from the server and sending messages to the server. Simple Rcon is developed to provide an easy to use interface for interacting with HL2 Servers. Game servers, and other servers can use Simple Rcon to send messages to HL2 clients. Using Simple Rcon clients in combination with the HL2 SDK will be the easiest way to send and receive messages to HL2 clients. Simple Rcon is used to send messages to and from HL2, HL2.5, and HL1/HL2/HL2.5 Servers. In this guide I will show you how to use Simple Rcon to add to your HL2 experience. The main features in Simple Rcon are, password protection, password expiration, timed delivery, and the ability to receive messages from the server, and also the ability to send and receive custom messages from the server. Restrictions: Simple

Rcon is available for both Windows and Linux as a stand alone application, or as an Online application. Simple Rcon Online is available as a client application, and is accessible from Password Protection Simple Rcon supports the ability to restrict access to the server by using a password. To turn on password protection, open simple.ini on the server, and increase the [password] attribute. Passwords can be at most 20 characters long. Password Generation To create a random password that is valid and unique, enter a set length, such as 8 or 12 characters. Then click the generate button. Once the password is generated, click the save password button, and type the password into the simple.ini file. The password will be stored in a file called simple.ini on the server, and the password will be used for the following sessions. Password Expiring You may want to limit the amount of time a client has access to the server, and allow you to shut down your server, and remove all the client accounts from the server without having to provide a password. To make the server expire after a certain amount of time, enter the time you want to make the server expire. If the server expires after a period of time, the client will not be able to access the server and the client will be disconnected. Timeouts are not cumulative. If a client is timed out, the next time 6a5afdab4c

The Microsoft Windows Runtime provides built-in support for remote desktop protocols. These protocols enable multiple Windows applications to communicate with remote devices such as desktop computers, smartphones, tablet computers, and laptops. The protocols include RDP (Remote Desktop Protocol), VNC (Virtual Network Computing), and XDMCP (X Display Manager Control Protocol). There are different methods to connect to a remote desktop. This article shows the steps to connect to a remote desktop using the WPF-based Simple Rcon application. For details of each method, see Microsoft's documentation for the RDP protocol. Prerequisites: To connect to a remote desktop, you must have the following installed: Server Windows Server 2008 or later is the only version of Windows that supports RDP. The Simple Rcon application is available for Windows Server 2008 R2 and later versions. Simple Rcon Installation: After you download the Simple Rcon application, you can install it either manually or using an automatic installer. The Simple Rcon application supports the following installation methods: Manual installation is simple. Copy the Simple Rcon.exe file to a location that is accessible to a remote desktop server that you want to connect to. You must install the Simple Rcon application on a remote desktop server before you can connect to the remote desktop. An automatic installer can perform these steps: After you download the Simple Rcon application, you can install it either manually or using an automatic installer. The Simple Rcon application supports the following installation methods: Note: For information about how to run the automatic installer, see Using the Simple Rcon Application. The Simple Rcon application uses the CodePlex website for continuous development. To ensure that the Simple Rcon application is always up to date, you can either manually download the updates from CodePlex or use the Microsoft Application Updates notification to be informed of updates to this application. To update the Simple Rcon application, launch it, and click the Update button. To update the installed files, select the Update software option, and then follow the instructions. Note: The update feature is not available with the Simple Rcon Windows Installer. To update the Simple Rcon application, download the Update Feature app from CodePlex and run the program.
