
WaveFunction Spartan 14 V1.1.4 26 EXCLUSIVE

June 9, 2021 – Spartan is the molecular modeling and computational chemistry app from Wavefunction. It contains code for molecular mechanics, .NET code for calculating the mass of particles and a set of plug-ins for solving problems in molecular dynamics (real time) and molecular spectroscopy (real time). For some tasks (such as molecular dynamics), Spartan uses .NET code that generates the particle mass from the values measured in the process. For example, when the equation of state for a gas containing hydrogen atoms is $(nH_2 + \frac{1}{2})vH_2$, the particle mass will be calculated as follows:
